2. The field surveys shall be carried out using high precision instruments, i.e. total stations, auto-level etc and would cover the following activities:
 - (i) Running a continuous open traverse along the existing and proposed pipeline / sewer alignments.
 - (ii) Collection of details for all features such as structures, utilities, existing roads, electric and telephone installations (both overhead as well as underground), huts, buildings, fencing, trees, oil and gas lines, etc. falling within the extent of surveys.
3. The width of survey corridor shall be as under:
 - (i) The topographic surveys shall cover sufficient width on both sides of proposed water pipelines / sewers.
 - (ii) In case need for bypassing the congested locations is felt and the feasibility study for the bypass is included in the TOR, preliminary survey would be carried out along the possible alignments in order to identify and select the most suitable alignments for the transmission mains / outfall sewers. The final alignment shall be got approved by the Authority. Further surveys shall be carried out along the final alignment.
4. The important features of the survey conducted and the reference points taken in consideration like GPS bench mark, temporary and permanent bench marks, etc. shall be listed in appropriate formats.
5. The topographical, alignment and land use surveys shall include the following:

- (a) Based on the full set of topographical maps of the National Remote Sensing Agency (the “**NRSA**”) of minimum resolution corresponding to 1:25,000 scale) and any Survey of India topographical maps, and the field surveys on alignments of the pipelines, the technical feasibility of the proposed water supply and sewerage system routes shall be verified through physical visits (e.g. driving and walking) of the entire length. The definition of the system routes must be accurate enough to allow estimation of construction costs compatible with the needs of financial analysis. The three co-ordinates (latitude, longitude, altitude) of all major features (intake, intermediate pumping stations, turning points, river and mountain crossings, and similar) shall be determined with latest details/ features upto 0.5 km. on both sides of selected routes’ alignment. The Consultant shall procure all the maps for the system routes; and
- (b) the determination of the optimal Right-of-Way (the “**RoW**”) requirements from technical, legal, economic, environmental and social perspectives.

SCHEDULE-3*(See Clause 2.3.3)***Guidance Note on Conflict of Interest**

1. This Note further explains and illustrates the provisions of Clause 2.3 of the RFP and shall be read together therewith in dealing with specific cases.
2. Consultants should be deemed to be in a conflict of interest situation if it can be reasonably concluded that their position in a business or their personal interest could improperly influence their judgment in the exercise of their duties. The process for selection of consultants should avoid both actual and perceived conflict of interest.
3. Conflict of interest may arise between the Authority and a consultant or between consultants and present or future concessionaries/ contractors. Some of the situations that would involve conflict of interest are identified below:
 - (a) Authority and consultants:
 - (i) Potential consultant should not be privy to information from the Authority which is not available to others;
 - (ii) potential consultant should not have defined the project when earlier working for the Authority;
 - (iii) potential consultant should not have recently worked for the Authority overseeing the project.
 - (b) Consultants and concessionaires/contractors:
 - (i) No consultant should have an ownership interest or a continuing business interest or an on-going relationship with a potential concessionaire/ contractor save and except relationships restricted to project-specific and short-term assignments; or
 - (ii) no consultant should be involved in owning or operating entities resulting from the project; or
 - (iii) no consultant should bid for works arising from the project.

The participation of companies that may be involved as investors or consumers and officials of the Authority who have current or recent connections to the companies involved, therefore, needs to be avoided.

4. The normal way to identify conflicts of interest is through self-declaration by consultants. Where a conflict exists, which has not been declared, competing companies are likely to bring this to the notice of the Authority. All conflicts must be declared as and when the consultants become aware of them.
5. Another approach towards avoiding a conflict of interest is through the use of “Chinese walls” to avoid the flow of commercially sensitive information from one

part of the consultant's company to another. This could help overcome the problem of availability of limited numbers of experts for the project. However, in reality effective operation of "Chinese walls" may be a difficult proposition. As a general rule, larger companies will be more capable of adopting Chinese walls approach than smaller companies. Although, "Chinese walls" have been relatively common for many years, they are an increasingly discredited means of avoiding conflicts of interest and should be considered with caution. As a rule, "Chinese walls" should be considered as unacceptable and may be accepted only in exceptional cases upon full disclosure by a consultant coupled with provision of safeguards to the satisfaction of the Authority.

6. Another way to avoid conflicts of interest is through the appropriate grouping of tasks. For example, conflicts may arise if consultants drawing up the terms of reference or the proposed documentation are also eligible for the consequent assignment or project.
7. Another form of conflict of interest called "scope-creep" arises when consultants advocate either an unnecessary broadening of the terms of reference or make recommendations which are not in the best interests of the Authority but which will generate further work for the consultants. Some forms of contractual arrangements are more likely to lead to scope-creep. For example, lump-sum contracts provide fewer incentives for this, while time and material contracts provide built in incentives for consultants to extend the length of their assignment.
8. Every project contains potential conflicts of interest. Consultants should not only avoid any conflict of interest, they should report any present/ potential conflict of interest to the Authority at the earliest. Officials of the Authority involved in development of a project shall be responsible for identifying and resolving any conflicts of interest. It should be ensured that safeguards are in place to preserve fair and open competition and measures should be taken to eliminate any conflict of interest arising at any stage in the process.
